

Apple II File Type Notes

Developer Technical Support

File Type: **\$C1 (193)**
Auxiliary Type: **\$0000**

Full Name: Apple IIGS Super Hi-Res Graphics Screen Image
Short Name: Super Hi-Res Screen Image

Written by: Matt Deatherage

November 1988

Files of this type and auxiliary type contain a 32K unpacked picture image.

Files of type \$C1 and auxiliary type \$0000 contain a 32K unpacked Super Hi-Res screen image, which is created by writing the entire Super Hi-Res screen area (\$E12000–\$E19FFF) to a file. If you pass this data through the `PackBytes` routine, you can save the result as a file of type \$C0 and auxiliary type \$0001 (Packed Apple IIGS Super Hi-Res Image File).

Note: The first release of Activision's PaintWorks assumes that palette colors are ordered from highest to lowest luminance.
